

rtRT-PCR for the detection of O/ME-SA/SA-2018 FMDV

This real-time RT-PCR is a molecular tool for detection of Foot-and-mouth disease virus lineage O/ME-SA/SA-2018, as it is an emerging lineage in South Asia since 2018. The assay has been tested on 34 samples with a specificity of 91,7% (11/12 SA-2018 samples detected). The primers and probes are indicated hereafter:

Oligo name (final concentration)	Sequence (5'-3')	Use
SA2018_F3 (0.4 μM)	ACAACACCACCAATCCAAC	Forward Primer
SA2018_P3 (0.3 μM)	FAM-ACTCACCCGACTTGCACTGCCGT-TAMRA Probe	
SA2018_Rev2 (0.4 μM)	CGTTGTAAACAGTAGCCATGA	Reverse Primer

The SA-2018 has been validated using Ag-Path kit in a duplex system with β -actin, and following the volumes and concentrations as follow (5 μ l of RNA):

	Volume (µI)	Concentration		
	For one tube	Initial	Fir	nal
Ultrapure water (DNase RNase Free)	1,15		1	
Buffer 2X (kit AgPath-ID™)	12,5	2	1	Χ
Primer F	1	10	0,4	μM
Primer R	1	10	0,4	μM
Probe FAM-TAMRA	0,75	10	0,3	μM
Primer F β-actine	1	10	0,4	μM
Primer R β-actine	1	10	0,4	μM
Probe VIC-TAMRA β-actine	0,6	5	0,12	μM
RT-PCR mix 25X (Enzyme)	1	25	1	Χ

Real-time PCR program:

Cycles of RTq-PCR					
T°	Time	nb cycles			
45°C	10min	1			
95°C	10min	1			
95°C	15s	A.F.			
62°C	1min	45			

NB: This system has been validated on a small number of samples and should therefore be tested against other samples from this lineage.
